

**Instability in geophysical flows:
lecture notes for OC680**

W.D. Smyth

College of Earth, Ocean and Atmospheric Sciences,
Oregon State University

March 22, 2016

Contents

1 Preliminaries	9
1.1 What is instability?	10
1.1.1 The role of forcing	11
1.2 Goals of the course	11
1.3 Tools	12
1.4 Perturbation theory: the parking problem revisited [optional]	12
1.5 Numerical solution of a boundary value problem	15
1.5.1 Defining the problem	15
1.5.2 Discretization: the derivative matrix	16
1.5.3 Incorporating boundary conditions	18
1.6 Equations of motion	19
1.6.1 A note on viscosity and turbulence	21
2 Convective instability	23
2.1 Introduction	23
2.2 The perturbation equations	24
2.2.1 Hydrostatic equilibrium	24
2.2.2 Small departures from equilibrium: the linearized equations	25
2.3 Simple case: inviscid, nondiffusive, unbounded fluid	27
2.3.1 The normal mode solution	27
2.3.2 Instabilities and the fastest-growing mode	29
2.4 Viscous and diffusive effects	30
2.5 Boundary effects: the Rayleigh-Benard problem	31
2.5.1 Diffusion scaling	32
2.5.2 The critical state for the onset of convective instability	35
2.5.3 Nonlinear effects	36
2.6 Summary	37
2.7 Further reading	37
3 Instabilities of a parallel shear flow	39
3.1 Introduction	39
3.2 The perturbation equations	40
3.2.1 The equilibrium state	40
3.2.2 Perturbations from equilibrium	41
3.3 Rayleigh's equation	43
3.3.1 Normal modes in a shear flow	43
3.3.2 Rayleigh's equation for normal mode disturbances	44

3.3.3	Polarization relations	45
3.4	Analytical example: the piecewise-linear shear layer	45
3.5	Solution types	50
3.6	Numerical solution of Rayleigh's equation	50
3.6.1	Discretization and the generalized eigenvalue problem	50
3.6.2	Digital implementation	51
3.6.3	Boundary conditions: impermeable and asymptotic	52
3.7	Shear scaling	54
3.8	Oblique modes and Squire transformations	56
3.9	Perturbation kinetic energy	57
3.9.1	Kinetic energy evolution for a general disturbance	57
3.10	Numerical example #1: the hyperbolic tangent shear layer	59
3.11	Numerical example #2: the Bickley jet	59
3.11.1	Kinetic energy evolution for a normal mode instability	61
3.12	Necessary conditions for instability	62
3.12.1	Instability requires an inflection point in the mean velocity profile	62
3.12.2	The inflection point must be a shear maximum	64
3.12.3	Instability requires a critical level	65
3.12.4	Shear production and phase tilt	66
3.12.5	Summary: conditions for instability	67
3.13	The wave resonance mechanism of shear instability	67
3.13.1	Vortical waves	68
3.13.2	Vortical wave resonance and the conditions for instability	68
3.14	Summary	71
3.15	Further reading	72
3.16	Appendix: Classical proofs of the Rayleigh and Fjortoft theorems	72
3.16.1	Rayleigh's inflection point theorem	73
3.16.2	Fjortoft's theorem	73
4	Instabilities of a cylindrical vortex	75
4.1	Cyclostrophic equilibrium	76
4.2	The perturbation equations	76
4.3	Barotropic modes	77
4.3.1	Boundary conditions for barotropic modes	79
4.3.2	Stability theorem for barotropic modes	80
4.4	Axisymmetric modes	80
4.4.1	Boundary conditions for axisymmetric modes	81
4.4.2	Stability theorem for axisymmetric modes	81
5	Parallel shear flow: the effects of inhomogeneity	83
5.1	Introduction	83
5.2	The Richardson number	83
5.3	Equilibria and perturbations	86
5.3.1	Eliminating the pressure	87
5.4	Oblique modes	87
5.5	Veering flows	88
5.6	The Taylor-Goldstein equation	88
5.7	Internal waves	89

5.8	Kelvin-Helmholtz and Rayleigh-Taylor instabilities at an interface	89
5.9	The Miles-Howard theorem	92
5.10	Howard's semicircle theorem	93
5.11	The vertical buoyancy flux	95
5.12	Summary	96
5.13	Further reading	96
6	Instabilities of homogeneous, parallel shear flow: the effects of viscosity	97
6.1	Conditions for equilibrium	97
6.2	Conditions for quasi-equilibrium: the frozen flow approximation	98
6.3	The Orr-Sommerfeld equation	100
6.4	Boundary conditions for viscous fluid	100
6.4.1	The rigid boundary	101
6.4.2	The frictionless boundary	101
6.5	Matrix solution of the Orr-Sommerfeld equation	101
6.6	Oblique modes	102
6.7	Shear scaling and the Reynolds number	103
6.8	Application: viscous stabilization of a shear layer	104
6.9	Application: instabilities of plane Poiseuille flow	104
6.10	The perturbation kinetic energy budget for parallel shear flow in a viscous, homogeneous fluid	105
6.11	Summary	109
7	A viscous, diffusive, inhomogeneous, parallel shear flow	111
7.1	Expanding the basic equations	111
7.1.1	Continuity	111
7.1.2	Momentum	112
7.1.3	Buoyancy	112
7.1.4	Eliminating the pressure	113
7.2	Numerical solution methods	114
7.2.1	Boundary conditions	114
7.2.2	A note on applications	115
7.3	2D and oblique modes: Squire transformations	116
7.3.1	Alternative: transforming the background velocity	117
7.4	Shear and diffusion scalings	117
7.4.1	Example 1: shear scaling	118
7.4.2	Example 2: diffusion scaling	119
7.5	Application: Instabilities of a stratified shear layer	120
7.5.1	Kelvin-Helmholtz instability	122
7.5.2	Holmboe instability	123
7.6	Summary	124
7.7	References	124
8	Instability in a rotating environment	125
8.1	Frontal zones	125
8.2	The equilibrium state: thermal wind balance	125
8.3	The perturbation equations	127
8.4	Perturbation kinetic energy	127
8.5	The vertical vorticity equation	128

8.6	Numerical solution method	129
8.6.1	The pressure equation	129
8.6.2	The normal mode approach and its limitations	129
8.6.3	Numerical solution for normal modes	130
8.6.4	Boundary conditions	132
8.6.5	Shear scaling	132
8.7	Analytical solution 1: symmetric instability	132
8.8	Analytical solution 2: baroclinic instability	135
8.8.1	The quasigeostrophic potential vorticity perturbation	135
8.8.2	Eady waves	137
8.8.3	The Eady mode of baroclinic instability	138
8.8.4	Typical terrestrial values	141
8.9	Summary	142
8.10	References	142
9	Summary	143
9.1	Equilibrium states	143
9.2	Instabilities	144
9.2.1	Mechanisms	144
9.2.2	Rules of thumb	144
9.2.3	Numerical methods	145
9.3	References	145
10	A look ahead: instability and turbulence	147
10.1	Secondary instabilities and the transition to turbulence	147
10.2	Marginal instability	148
10.3	References	149
10.4	Appendix: details of the nonlinear simulation	151
11	Homework	153
11.1	OCE680 Assignment #1	153
11.1.1	PROJECT #1	153
11.1.2	PROJECT #2	154
11.1.3	PROJECT #3	154
11.2	OCE680 Assignment #2	158
11.2.1	PROJECT #1	158
11.2.2	PROJECT #2	159
11.3	OCE680 Assignment #3	160
11.3.1	PROJECT #1	160
11.3.2	PROJECT #2	161
11.4	OCE680 Assignment #4	162
11.4.1	PROJECT #1	162
11.4.2	PROJECT #2	162
11.5	OCE680 Assignment #5	164
11.5.1	PROJECT #1	164
11.5.2	PROJECT #2	164
11.5.3	PROJECT #3	165
11.5.4	PROJECT #4	165

11.6 OC680 Assignment #6 168
 11.6.1 PROJECT #1 168
 11.6.2 PROJECT #2 168
 11.6.3 PROJECT #3 168
11.7 OC680 Assignment #7 170
 11.7.1 Sheared convection 170
